ABSTRACT : The revolutionary changes in population size, and distribution during modern era and especially during the course of this century, have participated problems which are among the most serious confronting the contemporary world. In the post second world war period there has been much discussion of population problems not only by scientists but international agencies, national governments and business organizations as well. The quality and size of population are the two factors that are emphasized in development of human resource. Rapid growth in population creates many obstacles to economic progress. Also, it affects the quality of human resource adversely. The current paper throws light over the picture in which developing countries are already facing a lack in their resources and with the rapidly increasing population, the resources available per person are reduced further, leading to increased poverty, malnutrition and other large population-related problems.
