ABSTRACT

The present study was conducted in Parbhani district of Marathwada region of Maharashtra state. Parbhani, Jintur and Selu talukas of Parbhani district were purposively selected for study. Forty respondents were selected from each taluka on the basis of maximum area under greengram. Thus, 120 respondents were selected as sample for this study. The respondents were interviewed with the help of well structured interview schedule. Majority of the greengram growers were from medium farming experience, Middle School level of education, medium land holding, joint family type and medium extension contact, social participation, annual income, economic motivation, risk orientation, sources of information, market orientation with medium knowledge level of recommended package of practices of greengram. It was also observed that education, extension contact, social participation, annual income, economic motivation, risk orientation, sources of information, were positively and significantly related with the level of knowledge of recommended package of practices of greengram growers.
