**SUMMARY :** The present study was conducted to assess the job satisfaction among government officials and elected representative under Panchayati Raj system. For the purpose, 150 respondents were selected at random from two CD blocks, namely Shankar Garh and Zasra of Bara Thasil of Allahabad District. A majority (60%) of the Government Officials were having Job satisfaction score between 28-48 whereas a majority (65.34%) of elected representatives were having Job satisfaction score between 27-47. The independent variable like family size, materials possession and social participation of G.O. were found to be positively and significantly correlated with their Job satisfaction. In case of E.R. family type and cast was observed to be significantly and positively correlated with their Job satisfaction.
