SUMMARY : Bio-fertilizers are likely to assume greater significance as compliment or supplement to chemical fertilizers, they do not fixe atmospheric nitrogen, improved the soil fertility but also increase the agriculture production so thus, way improvement agro-ecological soundness. The present investigation was carried out adoption behaviour of contact farmers of Krishi Vigyan Kendra about bio-fertilizers. From correlation co-efficient analysis attitude and adoption had positive and significant contribution with constraint severity of respondents about utilization about bio-fertilizers. The present study concludes that although majority of the farmers have medium to high level of attitude, however, their adoption behaviour of contact farmers of KVK about bio-fertilizers. The probable reasons are technical, lack of knowledge as well as water availability constraints faced by the farmers in adoption of bio-fertilizers.
