SUMMARY : Training provides knowledge and develops skills required for adoption of the technology and builds up desirable scientific attitude. The present study was planned with the objective to analyze the knowledge gain of the participants from the training programme. The study was conducted during 2011 in Udaipur, Rajasthan. The sample for the study consisted of 54 participants who attended the training programme. The results of the study shows that majority of the respondents belonged to low category (70.39%) followed by high (18.52%) and medium (11.11%) level knowledge categories before the training programme. On the other hand percentage of respondents increased in both high (51.86%) and medium (16.66%) categories after the training programme and decreased in low (31.48%) category of knowledge level. A well –designed training programme, based on the need of the participants would help to gain knowledge.
