**Abstract :** The present investigation was conducted in Chikhaldara and Dharni taluka of Amravati district (Vidarbha region) of Maharashtra state. The main objective of the study was to assess the relationship between the profile of the tribal farmers with their perception towards KVK scientists. A pre-structured interview schedule was used to collect data from 120 tribal farmers from 10 villages which were selected by using ex-post facto design of the social research during 2022-2023. The statistical methods such as frequencies, percentage, mean, standard deviation and correlation were used. The data of research study show that variables namely age, farming experience, size of land holding and annual income were negatively non-significant with perception of tribal farmers. The variables education and training received were found positive and significant level of probability of 0.01 with perception of tribal farmers toward KVK scientists. While variable namely extension participation, mass media exposure and innovativeness were positively significant with perception of tribal farmers at 0.05 level of probability
