Effect of magnetic waves on plant growth, development and reproduction

P. Venkata Ramu, J. Panduranga Rao and P. Mallikarjuna Prasad

SUMMARY

The increase in population and change in the global environmental fluctuations, have been the responsible factors decline in the crop field. The chemical fertilizers, insecticides, pesticides and suitable genetic resources are commercially used for crop improvement. Geomagnetic field (GMF) therapy for plants have been an effective tool to control diseases and increase tolerance against adverse environment. The review of this article explores the recent and basic information about the impact of GMF on plant existence against the adverse climatic conditions, and how the plant protects from biotic and abiotic stress.

Key Words : Plant, Magnetic wave, Growth, reproduction
