New distributional record from Kaparada taluka in Valsad district (Gujarat)

T.G. GOHIL, B. THAKOR ALPESH AND V. H. RAO

Gohil, T.G., Thakor Alpesh, B., and Rao, V. H. (2011). New distributional record from Kaparada taluka in Valsad district (Gujarat), *Ann. Pharm. & Pharm. Sci.*, 2 (1& 2):72.

Key words: Stephania japonica, Syzygium rubicundum, Kaparada

Stephania japonica (Thunb.) Miers in Ann. (Menispermaceae) and Syzygium rubicundum W.and A. (Myrtaceae) are distributional recorded for the first time from Kaparada taluka (Gujarat). During survey for vegetation of Kaparada taluka, two plants, Stephania japonica (Thunb.) Miers in Ann. and Syzygium rubicundum W.and A. were collected. Syzygium rubicundum W. and A. were listed by Santapau and Janardhanan (1967) from Saurashtra but Santapau (1962) seems not to be sure of the identity of this species as can be judged by his remarks on p. 222. Specimens collected were deposited in the herbarium of Biology Department, B.K.M.Science College Valsad.

- Stephania japonica (Thunb.) Miers in Ann:

A slender twiners; Leaves simple, petiolate, based rounded, apex acuminate; Flowers minute, greenish-yellow, umbellate, sepals and petals 3-5; Drupes solitary, obovoid or globose, red (Fig. 1).

FLS: July – Aug. FRS: Aug. – Oct.

Syzygium rubicundum W. and A.:

A small tree, with smooth ash-coloured bark; Leaves ovate, shining above, pale beneathapex acuminate, base narrowed; Flowers pinkish white, Berries globose, black.
